

uBOT

Smart remote tank level monitoring

Smart monitoring - anywhere, anytime.

\$899

uBOT is a compact, rugged IoT device designed to track tank levels and rainfall in real time, and transmit all data securely via satellite to the uHUB dashboard. It gives you reliable, complete visibility over your water resources from anywhere.

Key features

- ✓ **Real-time tank level monitoring**
No more manual checks. Three updates per day.
- ✓ **High-accuracy rain gauge**
For smarter water resource management.
- ✓ **uHUB integration**
Real-time and historical insights, accessible anytime, via an easy-to-use dashboard.
- ✓ **Satellite communication**
Works in areas with zero cellular coverage - built for Australia's most remote stations.
- ✓ **GPS location & time sync**
Precise positioning and time synchronisation for accurate, reliable data logging.
- ✓ **Low-power & maintenance-free**
Designed to run for long periods in harsh environments with minimal intervention.

1- MONITOR

uBOT tracks tank levels, rainfall, and location data continuously in the field.

2- TRANSMIT

Data is securely sent via satellite, no cellular network required.

3- ACT

Log into your uHUB dashboard, see what's happening across your property, and stay one step ahead.
